Our areas of expertise

We offer you a high degree of convenience and security for your critical infrastructure through structure, conceptual diversity, maximum integrity and compatibility.

Security management

PSIM Winguard — Physical Security Information Management

VMS Senstar — Video Management System Basis

Core areas

ACCESS — Salto, Simons & Voss, Autec, Hörmann, Scheidt & Bachmann

VIDEO — Senstar, Axis

FIRE — Esser, Telenot, Detectomat

INTRUSION — Telenot, Senstar Perimeter

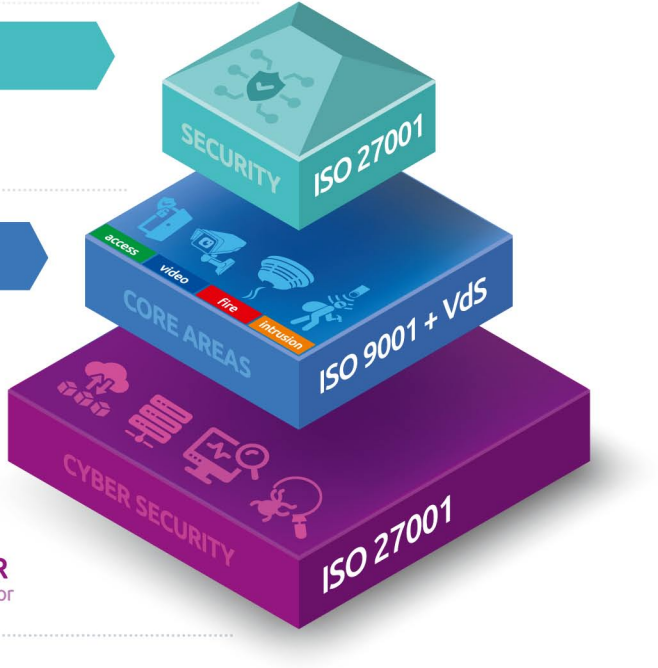
Cyber Security

VPN/CLOUD — Sophos and Main manufacturer

BACKUP — VEEAM

MONITORING — PAESSLER

THREAT SCANNER — Nextron / Thor



Status: 01.07.2025

Germany-wide Partner network

Rutte Sicherungstechnik combines expertise, technical know-how, maximum flexibility as well as regional service, maintenance management and 24-hour/7-day emergency preparedness in a Germany-wide network.

RUTTE
SICHERUNGSTECHNIK

access | video | fire | intrusion

Your advantages:

- ☑ Germany-wide support for corporations and SMEs
- ☑ standardised federal hourly rates and travel allowances
- ☑ huge spare parts pool for existing systems
- ☑ compensation for supply bottlenecks

Performance expertise

Our quality management and clear supplier structures ensure precise, binding project planning for reliable, prompt implementation.

Planning & concept

Personal German-speaking contact person
Qualified security consultants, on-site advice, regular training courses, ISO certifications

Project

Complete project management, cost control, transparent planning and technical documentation

Installation & commissioning

New construction and commissioning of electronic security systems, monitoring, integration and supervision of external trades

24 hour / 7 days service

24-hour emergency service, emergency call, error analysis, audit, property security management, spare parts service

Maintenance

Inspections, support and takeover of existing systems, provision of a regular TÜV inspector, replacement / migration of old systems

VdS Certified installation company

Certified according to DIN EN ISO 9001

BHE Certified specialist company

24 hours 24-hour service

DIN 14675 Certified

Our focus is specifically on the four core areas of electronic security technology.

Intrusion alarm systems

Prevention. Hazard detection. Intrusion report.

Smart security technology recognises and differentiates every silent or low-vibration hazardous situation. We rely on modern AI-supported and proven, VdS-certified security systems from experienced German market leaders.

VdS-certified installer of

- ☑ smart business intrusion alarm systems
- ☑ emergency call, robbery and dead man's switch systems
- ☑ in partnership with the German supplier and market leaderTelenot

TELENOT
Technik für Sicherheit

Fire alarm technology

DIN 14675. VDS 2095.

Saves lives and protect capital goods.
We have suitable and flexible solutions for
the preventive security of your buildings and systems.
Comprehensive fire alarm technology according to DIN 14675.

Our fire alarm control panel portfolio

- ☑ new construction and commissioning of fire alarm systems
- ☑ monitoring of the BMZ network, app activation
- ☑ communication with the local fire department
- ☑ TÜV testing, maintenance and inspection
- ☑ replacement and integration of old systems
- ☑ 24 hours / 7 days emergency service

We are a regional support centre for numerous fire alarm manufacturers.

Access management

Turnstiles. Barriers. Intelligent parking systems.

Classic, professional and stuff-saving access systems such as turnstiles, pedestrian locks, barriers or elegant bollards are now safer, more flexible and more efficient thanks to networkable access technologies and integrable AI.

Modern access systems offer

- ☑ easy and quick access
- ☑ card, chip or token-based authorization
- ☑ integrable keyless technologies
- ☑ camera-based access or entry with second-accurate and tax-confirmable billing systems

HÖRMANN

SCHEIDT&BACHMANN

Perimeter and fence security

Electronic protection of fence systems and outdoor areas

Intelligent protection of critical infrastructure with our KRITIS perimeter protection kit.

Works via sensors on all types of fence systems or via inconspicuous ground detection using sensor cables laid underground. Can be combined with 4K video detection for fence systems and outdoor areas.

- ☑ retrofittable sensors for existing systems
- ☑ unobtrusive, elegant large-area protection
- ☑ for rough, difficult to secure terrain
- ☑ scalable to any area size
- ☑ automated inspection and maintenance

On request, we can advise you on-site on all the options for electronically securing your critical infrastructure (KRITIS).

SENSTAR.

Access control

Digital locking systems for interior and exterior doors

Electronic keyless locking systems offer you a high level of security as well as a wide range of options for absolute access control.

- ☑ safe, easy and quick handling
- ☑ access authorization via RFID card, RFID transponder, RFID wristbands or mobile phone
- ☑ simple, cost-effective allocation and dublication of access authorization
- ☑ personal access authorizations accurate to the second
- ☑ archived access times for administrativ evaluation

Simons≡Voss technologies

SALTO inspiredaccess

Security management (PSIM)

Intelligent control platform for all security systems

Use the manufacturer-independent WINGUARD software to control all your security components for video, access management, fire and intrusion alarms.

You receive a central, organized and clear visualization and networking of your security systems.
All hazardous events are immediately recorded, analyzed and identified. Automated and supporting procedure instructions from the platform help you to manage all dangerous situations in a controlled manner.

- ☑ scalable to any company size and all individual security requirements
- ☑ consulting, project planning, software installation and linking of all components
- ☑ graphic visualisation of the individual components, control and management of the security technology via a visual site plan
- ☑ alarm and fault visualization
- ☑ audit and reporting function
- ☑ maintenance, support, 24/7 Service

winguard
always retain control

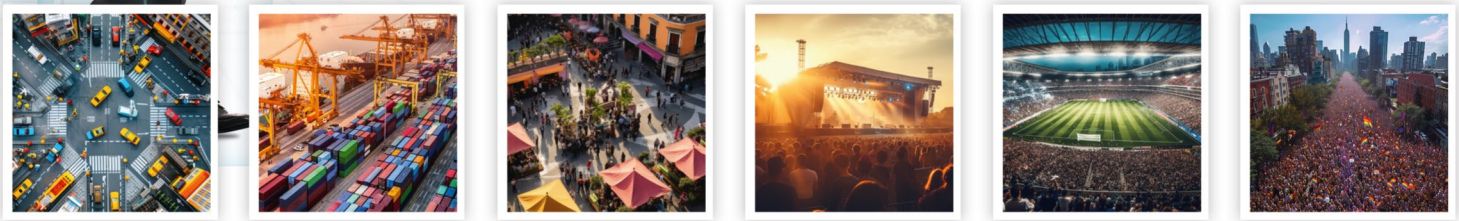
Digital AI video systems

Live safeguard of critical infrastructure in high resolution

Secure and monitor large areas in sensitive, protected or public spaces in live mode.
With a range of solid, robust and unobtrusive cameras, some of which conceal their current orientation.

- ☑ object detection and human recognition
- ☑ AI-supported evaluation and flexible presentation of the analysis results in live mode
- ☑ integrable software functions for video analysis using smart assistance systems
- ☑ high-resolution, detailed night mode
- ☑ combination of thermal imaging camera and visual camera
- ☑ electronic image stabilization with 360° swivel range

AXIS COMMUNICATIONS



Video management (VMS)

Intelligent control and security via video

Manage operational processes 24/7 using artificial intelligence without the traditional commitment of personnel.
Increase your added value by reducing time-consuming search, control and documentation processes.
Protect yourself preventively against unwanted handling.

- ☑ identify, protect, find, manage and document
- ☑ discreet automated detection and documentation of all unusual events in the predefined area
- ☑ intelligent control of processes, movements and logical sequences on the company premises via video
- ☑ localization of lost and missplaced goods
- ☑ documentation of storage location, transportation, condition and number of goods and items via video
- ☑ automated evaluation, reporting and documentation of safety instructions and hygiene guidelines for certified quality management

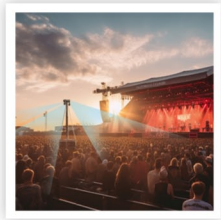
AXIS COMMUNICATIONS | SENSTAR

Mobile 4K-Videotower

Self-sufficient security of KRITIS in public sector

Secure your construction sites, events, and outdoor areas without a network connection everyday. We manufacture state-of-the-art mobile video towers for fast and flexible use.

- ☑ massive, transport-secured video tower for 360° surveillance
- ☑ long-term recordings with high-resolution 4K cameras
- ☑ digital motion detection and sabotage protection systems
- ☑ 24 hours / 7 days self-sufficient power supply
- ☑ 4G/5G live transmission via mobile network
- ☑ local wireless transmission to guard container
- ☑ connection to emergency call centers
- ☑ financing and leasing options



Cyber Security

for your data, hardware and IT infrastructure

Our Cyber Security department creates versatile and modern solutions for a flexible security concept. To protect your assets and critical IT infrastructure. Long-term tested software and hardware ensure the security of your sensitive data and IT technology.

- ☑ threat scanner with anomaly detection
- ☑ VPN for secure encryption and management
- ☑ multi-factor authentication for secure remote access
- ☑ cloud-based services and applications
- ☑ PRTG network monitoring with real-time alarms, SLA monitoring and reporting
- ☑ patch management to update software and to combat security gaps and bugs
- ☑ veeam backup solutions
